ABSTRACT

A summary of my report that I will submit during the training period at the Meethaq Training Institute accredited by the General Organization for Vocational and Technical Training, based on my personal experience and the achievement of my scientific and practical skills in developing my goals and the extent of my information expansion in them to benefit from them throughout my future academic years, and the application of the courses I studied in the College of Computing and Information Technology , such as the fundamentals of networking, web systems, databases, computer skills and professional ethics during my internship in the technology department

In the networks, I connected the computers to the main machine of the Institute, and I updated the data of the trainees and employees, as well as I was asked to create a website describing what I was trained on and adding some courses on the Institute's website. record through it

Assisting some employees in work pressure by printing important papers, writing some documents, organizing some courses, and scheduling courses via the Zoom platform. Equipping the halls with visual presentation and ensuring the safety of the devices.

2.Training Program

[Figure 1]

2.1 Company Profile

Mithaq Training Institute provides various courses in various fields, including computer, administrative, financial, and professional licenses. With experienced professionals from various Saudi Arabian regions, the institute aims to provide clients with knowledge, skills, and leadership for the future. The vision is to achieve sustainable development by 2030, using modern methods and strategies with balanced profitability[1].

2.1.1 Department Overview

Department of Technology, Mithaq Institute, under the supervision of Ms. Hanan Al Arifi
Computers and technical support, as well as online platform supervision .

2.2 Work Description

I was trained to identify computers, whether in the computer hall or the desktop computer - Distribute the network and connect it between the main computer and other devices - Select the HP printer on the desktop computer - Update and add on the institute platform under the supervision of administrators - Create an account for me on the Wahaj platform to manage the institutes so that I can Among the updates on the site and facing any problem - maintenance of the computer hall in the institute - defining the network in the institute.

2.2.1 List of Projects/Tasks

Task

- 1- Adding new courses and trainers through the institute platform
- 2- Updating the registered data through the platform
- 3- Periodic maintenance of the platform
- 4- Updating the Institute's data through the database
- 5 - Create a website

2.2.2 Projects/Task One (Create a website)

2.2.2.1 Background

My department gave me the task of a small project, which is to create a simple website about my training at the institute, describing the simple tasks and tasks that I carried out.

2.2.2.2(Problems Faced & Solutions)(Tools and Techniques used to solve the problem)

The problem that I encountered is writing the HTML code using the Notepad program, and some errors were shown in writing the code, and the solution is to download the Visual Studio program to correct some errors.

2.2.2.3 Relationship to academic background

This project has already been learned in the web systems course under the supervision of Dr. Maryam Al-Nafaie. The course talks about how to create a website through web languages.

3. Technical Experience 3.1 Experience Gained & Techniques Learned

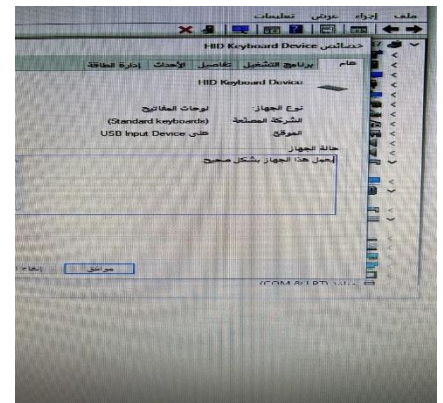

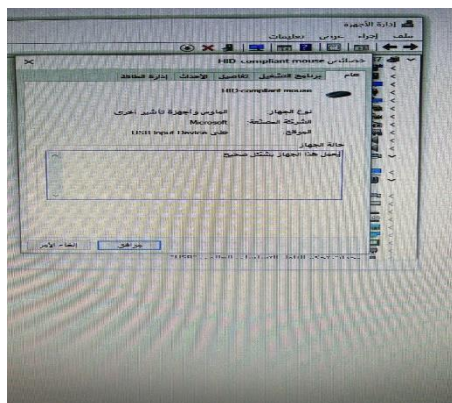

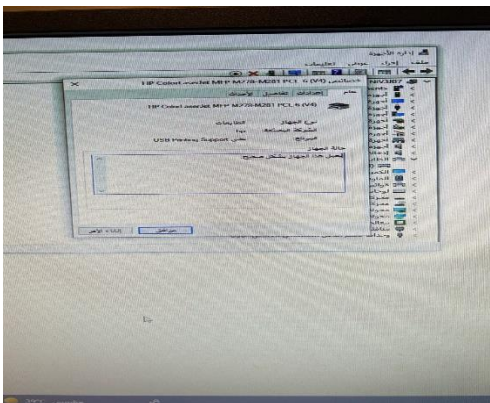

1- At the beginning of the training, I learned the rules of the facility, the general ethics, the official working hours for the training, as well as the place of my training, maintaining the integrity of the institute's computers, and getting to know my computer for the training , and find out the type of operating system.

[Figure 2]

2- Maintenance and follow-up of the Institute's devices by checking the operating systems for each device, activating Windows and Office programs, updating the Institute's devices, detecting and correcting errors, and installing protection programs such as virus detection.

3- Definition of some new printers, mouse and keyboard, which are of the HP type, to connect to the Institute's devices.

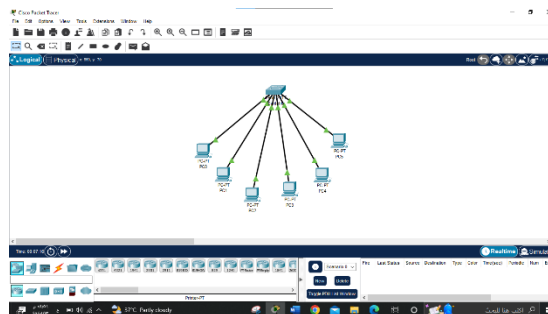

[Figure 3]

4-Cabinet device and network distributor There are three of them in the institute It is a network distributor located in the communication room where the network cables are collected In an organized way, inside it there is a switch that connects a group of devices together through Internet wires, and the switch can group printers with devices across the network.

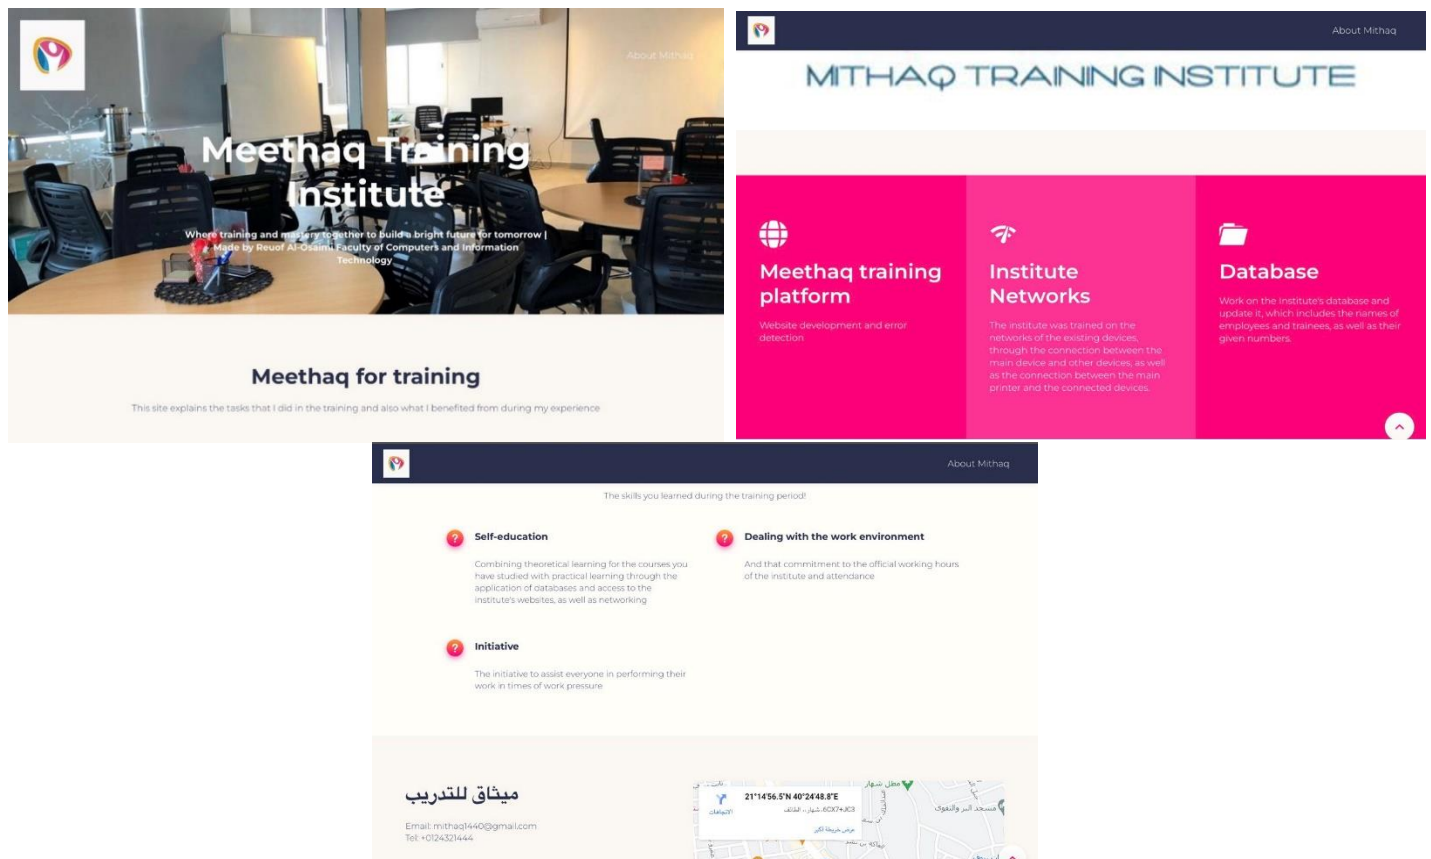

[Figure 4]

5-Simulation was done to simulate the connection of the trainees' lab devices to the Switch , a simulation program developed by Cisco On the other hand, a switch is a small device that serves as a communications center between devices in a single local network (LAN), as it receives information from each computer on the network in the form of packets of data transmitted by all connected devices, and once the switch receives the packet, it decides Where should the data be sent, and then redirect it to the correct destination.

[Figure 5]

6-He asked me to create a simple website for the Mithaq institute, showing what I trained at the institute using HTML and CSS web languages .HTML is the official language recommended by the World Wide Web Consortium (W3C) and is generally adhered to by all major web browsers, including desktop and mobile web browsers. HTML5 is the latest version of the specification HTML is an abbreviation for hypertext Markup Language (H) and stands for Hypertext Markup Language. HTML consists of the tags and commands that web designers use to create websites. CSS - short for - (Cascading Style Sheet) is a descriptive language that gives the website its beautiful look and unique design that will distinguish it from other websites. The CSS language is friendly to the HTML language, as it always accompanies it and beside it in designing and creating web pages.

[Figure 6]

7-Some Online courses have been scheduled by scheduling them through the Zoom program at the institute's account, by holding the day, date and time required for each course and determining the number of trainee .

8-Implementation of some form via Google a Mithaq account to evaluate some courses by the trainers for these courses and publish a questionnaire about them, as well as design a form to register the trainees to participate in a trip organized by the institute.

The figure displays two Google Forms side-by-side. The left form is titled "Preparing the trainees for the year2023" and includes a description: "Through this form, the preparation of trainees in all courses at Mithaq institute is shown. By Reuof Alosaimi Students to Taif university ID :44003604". It features a "Not shared" status and a question "The coach's name" with a text input field. The right form is titled "Type and description of the course offered" and has three radio button options: "Computer to programming", "English language", and "Kindergarten". Below this is a section for "Full satisfaction with the level and performance of students" with a scale from 1 (Very satisfied) to 5 (less than expected). Both forms have "Submit" and "Clear form" buttons at the bottom.

[Figure 7]

9-Carrying out some of the Institute's work, such as preparing course reports via Word and modifying trainees' data via Excel.

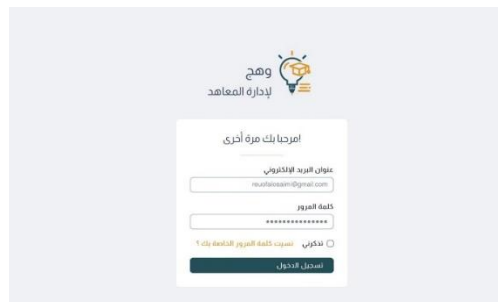

10-Adding and updating the institute's database under the supervision of those responsible for it.

[Figure 8]

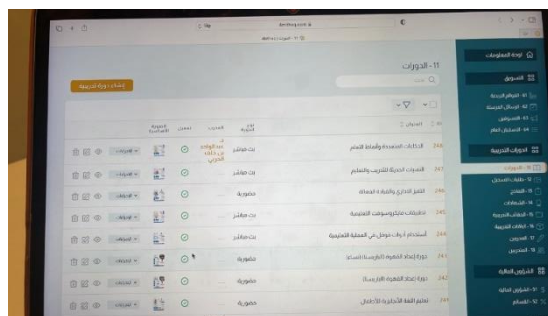

11-Updating and maintaining some of the devices in the computer hall, as the hall consists of 20 devices and a network and Internet distributor, and some devices have been defined, including the keyboard and hard disk.

12-The training took place on the Wahaj platform to manage the institutes, as the institute created an account for me in my name.

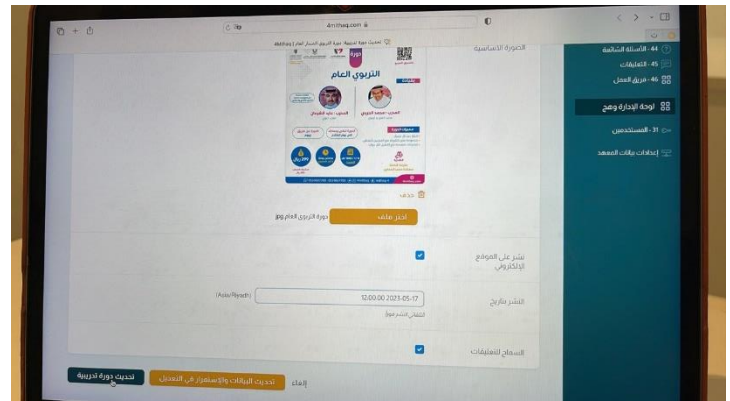

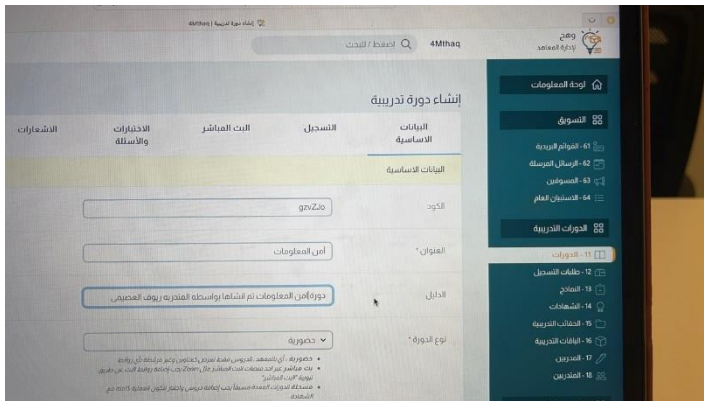

[Figure 9]

Reviewing course requests, adding some new courses to the site, and updating course data, under the supervision of the trainer.

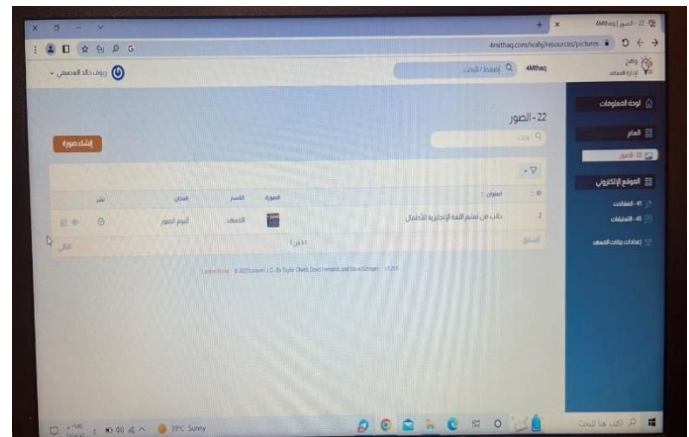

[Figure 9]

[Figure 9]

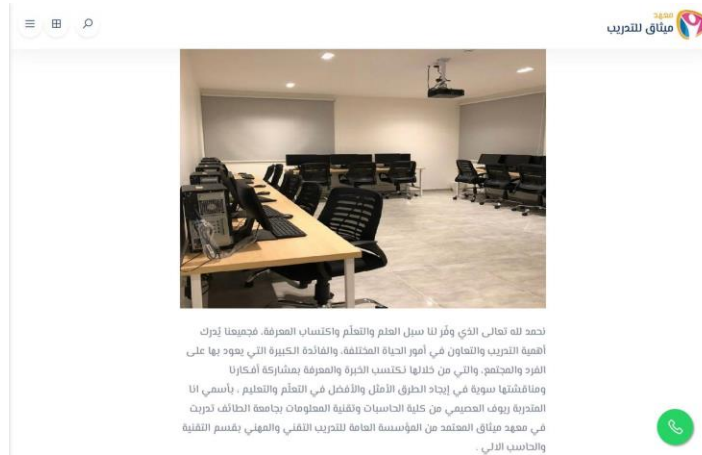

Creating training courses and recording the necessary information for each new course, such as the price, its content, the name of the trainer, its classification, either attendance or live broadcast, the number of hours, the number of days, and the start and end date of registration

Some photos and articles have been published on the Institute's website

[Figure 9]

13-I published an article titled The Importance of Cooperative Training on the Mithaq Institute website.

[Figure 10]

3.2 Challenges Faced During Training

- Some devices have two Windows systems, system 10 and system 7
- Updating some courses on the site due to the lack of a sufficient number to hold the course
- Difficulty dealing with some existing devices

4. Conclusions and Recommendations

In conclusion, this training was an experience that I gained, as it enabled me to know myself and be an active role in society, as the training period is part of my academic life, in which I learned a lot of skills, such as activating the information technology specialization at the institute's headquarters, and I learned about the importance of working within a team, cooperation, and getting to know the work environment, and finally I thank the Faculty of Computing and Information Technology at Taif University for supporting the field experience course. The greatest benefit of the training is to provide the opportunity for the student to gain practical experience through training before graduation and to deepen his understanding of the specialization. Accustom the student to discipline, sincerity in work, adherence to deadlines, and respect for regulations. Enable the student to interact with the future work environment and deal with community members from outside the college. Preparing the student to take responsibility and enhance his self-confidence.
